Purolator Oil and Air Filters Become Purolator Classic

Purolator recently announced its standard line of Purolator oil and air filters will now be marketed as Purolator Classic. This branding will be added to packaging, sales and marketing brochures, the website and other Purolator promotional materials.

The line of filters was originally referred to as Purolator PremiumPlus and subsequently just Purolator.

Purolator's PureOne premium oil and air filters will continue to serve as the top-

of-the-line filter.

The Purolator Classic oil filter's multi-fiber high-density media provides a vehicle's engine with protection against harmful contaminants at a slightly lower price than the PureOne.

The Purolator Classic air filter features a multi-fiber high-density media that is engineered and tested to trap 96.5 percent of harmful contaminants before they can enter and damage a car's engine.

OTC Rolls Out Two New Hendrickson Primaax Tools

OTC recently released the new Quick Alignment Socket and the new Quick Wrench. These new Hendrickson-approved tools were designed to promote technician productivity and efficiency when servicing Primaax suspensions. These tools are built from top-grade, high-quality steel for maximum durability.

The OTC Quick Alignment Socket can be used to adjust axle alignment on the Primaax air suspension and works on Primaax models 230, 460 and 690 suspensions.

The OTC Quick Wrench is used to torque cross tube end cap bolts and longitudinal torque rod top pad bolts. It increases pro-

ductivity and reduces maintenance time by eliminating the need to remove the tires to access the end cap bolt. The Quick Wrench can be used with various Hendrickson Pri-

maax suspensions: the PAX 230/460/690 with 8.5-inch ride height, FMX 240/480 with 8.5-inch ride height, and PAX 230/460/690

with 10-inch ride height. For more information, call 800.533.6127 or visit: www.otctools.com

Flo-Dynamics Releases Brake System Bleeder/Flusher

Flo-Dynamics recently released a new brake system bleeder/flusher, the Brakemate Jr.

The Brakemate Jr. eliminates the need for multiple technicians to perform normal brake service. One technician can perform the service faster, easier and safer. The unit includes an automatic low fluid shutoff that prevents air being introduced to the brake system.

Another important feature is the adjustable pressure regulator. Many hybrids require a higher than normal pressure to service the system, and the Brakemate Jr. can service all of them.

One model of the machine comes with a complete set of adapters in an organized case attached to the machine, while the other comes without adapters. This allows a shop to choose which adapters fit its needs.

For more information, call 800.303.5874 or visit: www.flodynamics.com

EBM Design Releases EZcarlift

EBM Design recently released a new EZcarlift. Powered by an electric hand drill,

this low-rise, low profile lift can raise a 4,400-pound car a full 26 inches off the ground to allow plenty of workspace.

EZcarlift consists of four individual sections — two lifting ramps and two cross bars — that assemble easily with nothing more than a box wrench or a socket and driver. The cross bars are available in different lengths to accommodate any car make and model. Available in both steel and aluminum, the lift has a total weight of less than 164 pounds, with the heaviest section weighing less than 61 pounds.

The EZcarlift's rigid design, platform-

like arrangement and tubular construction provide exceptional stability at all heights. To use the lift, simply roll it into position under the car and plug in the power drill to raise all four wheels. At its maximum height, the lift creates unobstructed access to the car from all four sides.

The EZcarlift is designed to raise vertically rather than in an arc motion, so it can be operated safely even in small workspaces. When lowered, EZcarlift sits four inches off the ground.

For more information, call 800.392.2754 or visit: www.ezcarlift.com

Bar's Leaks Launches Cooling System Treatment

The new Professional DiFM Cooling System Treatment from Bar's Leaks protects vehicle cooling systems and seals internal, external and coolant-to-oil leaks. It can be used in any vehicle and is compatible with all types and brands of antifreeze, including silicate-based and OAT/HOAT coolant. It also works in systems containing only water.

The treatment's tablets are five grams each for easier installation in modern radiator necks, and they fully dissolve in
