

PRODUCT INFORMATION

“FACTS & FEATURES”

What is EZcarlift™?

EZcarlift™ is the new standard of what a home garage car lift is all about – it’s strong, easy to use, safe, convenient, compact, easy to store, portable, and affordable. It was especially developed with the home mechanic in mind - the classic car enthusiast, the antique or vintage car hobbyist, the weekend race track warrior, and the “boy with all his toys” (bikes, ATVs, etc.). Powered by an electric hand drill, this free-standing low profile lift will raise your 4,400 lbs. vehicle from 4 up to 26 inches high in less than 150 seconds to give you plenty of comfortable open work space and access. At its maximum height, the lift’s open design creates unobstructed access to the car from all four sides.

With its optional accessories and all its versatility the EZcarlift™ becomes a One-For-All tool for your garage or shop.

Design & Construction

The EZcarlift’s™ rigid, platform-like arrangement and rugged tubular construction provides lightweight, superb stability and safety at all heights. It’s free-standing open style design provides total accessibility from all sides, and its specially-designed legs take up less space than 4 common jack stands. EZcarlift™ is based on the principal of a mechanical scissor jack - simply roll it into position under the vehicle, set the cross bars and lifting pads, then insert the electric drill and watch as all four wheels clear the floor in less than a minute – no heavy lifting required! In addition, and unlike other low-rise lifts, the EZcarlift™ is designed to raise vertically rather than in an arc motion so it can be operated safely even in small work spaces.

In addition, optional casters can be attached to the lift so the vehicle can be moved while its wheels are off the ground. This makes the EZcarlift™ perfect for long term projects, seasonal storage, or for leaving the car raised but moved out of the way while an owner or mechanic waits for parts or the spare time to do the work.

Versatility

In addition to its primary function as a portable, free-standing car lift, the EZcarlift™ can be used as a moving vehicle dolly, a seasonal or temporary storing platform, a cycle lift, cycle dolly, an ATV work platform, work bench, a lifting platform to lift and load / unload heavy objects (engines, transmissions, cruiser bikes, ATVs, etc.) to and from pick-up truck beds, a sawhorse, and more. It’s even been used as a picnic table and seating bench. The versatility and universal possibilities of the EZcarlift™ are limited only by your imagination!

Portability

There are a lot of "portable" lifts on the market. The problem, however, is that many of them weigh in at almost 1,000 lbs! The EZcarlift™ is different. It's the only one of its kind that offers true portability and heavy lifting capability in a light weight package. Despite its outstanding load capacity of 4,400 lbs, it is the lightest lift on the market with a total weight of less than 165 lbs. fully assembled!

As a portable system, the EZcarlift™ is specifically designed to be brought TO your vehicle vs the other way around, which means it works in your garage or driveway as well as the racetrack. It's also a perfect solution for home association and condominium environments where parking permits and restrictions mandate free-standing portability.

Assembly is easy and typically takes less than 2 minutes (once you get the hang of it) using nothing more than a box wrench or a socket and driver. The EZcarlift™ consists of four individual sections - two lifting ramps and two cross bars – with the heaviest section weighing in at only 61 pounds, making it possible for the EZcarlift™ to be handled and assembled by a single person. The EZcarlift™ is also easily transportable, and disassembled will fit in most midsize car trunks.

Storage

The EZcarlift™ is extremely compact – it measures less than 2.9 cu ft. and sits just 4" tall when lowered for easy vehicle clearance. It can be stored almost anywhere - underneath your vehicle; leaned against the garage wall; or disassembled will fit flush between the wall studs of your garage.

Purchase and Delivery

EZcarlift™ is available for home or business delivery via most common ground carriers like UPS or FedEx. It will arrive at your door step in 2 boxes containing 4 fully pre-assembled sections. Simply bolt the sections together via eight (8) fasteners and you're ready to go - no complicated instructions or time-consuming assembly required!

The cost of the EZcarlift™ is only **\$2,295.00** + shipping and handling (\$150.00 includes 1 set of Cross Spacers of your choice anywhere in the lower 48 States - Add \$50.00 for shipping to Alaska, Hawaii, and U.S. Possessions). EZcarlift™ is available for immediate delivery.

Options & Accessories

Cross spacers, moving castors, and motorcycle accessories listed separately – please see our website's "Products" page.

Portable, versatile, and easy to use, the EZcarlift™ is an outstanding investment for the active home mechanic, neighborhood, car club, race team, or classic car enthusiast. We invite you to shop & compare. We believe the EZcarlift™ is the best product of its kind on the market today, and are confident that you'll feel the same way.
