

PRODUCT INFORMATION

"OPTIONS AND ACCESSORIES"

Cross Spacers

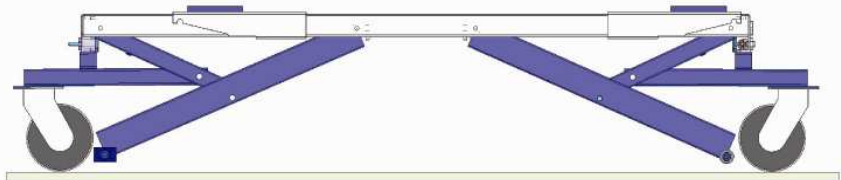

There are 4 sizes of Cross Spacers available in increments of 14 inches. The lift will accommodate cars with frames or unibody frames from 15 to 76 inches wide (perfect for the TR2s through the full size GTOs - sorry no 50's or 60's Caddies). The lift

includes one Cross Spacer as per your need. Additional Cross Spacers to accommodate different vehicles are optional at cost of **\$110.00** + \$25 s&h.

Moving Castors

The optional 6" heavy duty Moving Castors will allow the vehicle to be easily moved around the garage work area while

on the lift. This is perfect for long term projects where the vehicle has to be off the ground. While you are waiting for parts or for time to do the work, you can move the vehicle to the side and free up the space in your garage. Or you can move the project vehicle from the storage place to the work area. It is also advantageous when you are seasonably storing your vehicle. While off the ground, your vehicle could be moved easily around the garage or your storage area to give you access. Or you can use it to free up more garage space for everyday use (where you can place your weekend fun driver out of your way). A set consists of four 6" non-marring Poly Urethane casters – two (2) with brakes and two (2) with 90 degree (quarter turn) lock. The ¼ turn locks allows a control move of your vehicle. This option is **\$245.00** + \$45 s&h

Motorcycle Accessories

In the near future an optional Cycle Vice with a Cycle Ramp will convert EZcarlift™ to a 34" wide by 96" long Cycle Lift. With the moving castors attached the Cycle Lift will convert to a Cycle Dolly.
